

Cal.1041 (Self-Winding Chronometer)

FOURTH GENERATION

The Cal.1041 represents the first chronometer movement used in the Speedmaster family. Omega fine-tuned the design of the Cal.1040 as part of the company's 125th anniversary celebrations, and sold 2,000 units as a limited edition. To qualify the Cal.1041 as a chronometer, it was necessary to reevaluate each and every part, and the watches were assembled not by machine but by skilled craftsmen. As a result, the Cal.1041 is a totally different movement from the Cal.1040. Nevertheless, because the Cal.1040 served as such an excellent foundation, the Cal.1041 was easily able to obtain certification as a chronometer.

At first glance, the differences between Cal. 1041 and Cal. 1040 are far from obvious. On close inspection, it can be seen that the design of every part has been "fine-tuned." Adjustment is also important, but by itself, it is not enough to qualify a movement as a chronograph.

The word "chronometer" is proudly written on the dial. The watch's design conveys a sense of seriousness appropriate to the commemoration of the 125th anniversary of the Omega Company's founding.

The movement is stamped with a notation ascertaining adjustment in five-positions and temperature differential adjustment. This stamping does not appear on the Cal.1040.
